

# MEMS Manufacturing Process Engineer

As a MEMS Manufacturing Process Engineer at Novela Neurotech, your role is to sustain existing processes and products and support the development of future MEMS products and processes. This is a hands-on, process sustaining role with responsibility for multiple areas in a MEMS fabrication facility.

## We are seeking candidates with:

5+ years of experience with MEMS process sustaining and development.

Experience with semiconductor fabrication processes in multiple areas of the fab including, photolithography, etch (including DRIE), thin films, diffusion, and wafer dicing.

Experienced in the use of DOE, failure analysis methodologies, and SPC for process optimization and control.
