

## Verification Engineer

PCB/ Packaging Assembly/ Wirebond/ High Speed

The successful candidate ensures that products shipped meet specification and quality goals, manages product development builds, and provides sustaining support for these products during normal production.

Interfaces internally as a central product resource with design, process, manufacturing, test, quality, and reliability.

Externally is the customer's primary technical contact for these products. Formulates and executes long term plans for all product aspects affecting product cost, quality, and performance. Provides cross-functional leadership to address overall product management.
